

» STEROIDS

The use and abuse of performance-enhance substances, e.g. anabolic steroids, continues to plague competitive sports. The detection of synthetic steroids is a continuing challenge for analytical laboratories especially because of the availability of numerous of such compounds.

As for other drugs and/or drugs of abuse, there is a major interest to measure steroids in biological samples for sport but also for clinical and forensic cases.

To support laboratories involved in the steroid testing, LIPOMED now supply high quality reference standards for the steroids of interest available as ready-to-use calibrated solution and/or as standard pack sizes of 10 mg, 50 mg and 100 mg.
